Professional Summary

Software developer with 2 years of experience in outsourcing development. I have worked on projects that allowed me to develop technologies such as React, Node.js, NestJS, in addition to using other technologies that allowed me to carry out development according to companies, such as WSL, GitHub docker.

My goal is to apply my skills in software development and team leadership to manage large-scale projects, ensuring the delivery of innovative solutions, within established deadlines and with the expected quality standards.

Achievements

Winner at the 10th Young Researchers Meeting (UASLP) with a virtual reality project using OpenSpace3D, integrating interaction using a Myo bracelet and Xbox One control.
